## DETAILED ACTION

### *Claim Objections*

1. Claims 5 and 10 are objected to because of the following informalities: claims 5 and 10 recite "a first pillar" twice and the second occurrence of "a first pillar" appears that it should be "a second pillar" since there are pillars from two different heaters. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Fouquet et al (U.S. Patent 5,699,462, submitted by applicant).

Fouquet et al disclose a total internal reflection optical switch method and apparatus comprising: waveguides (206, 208 in figure 17 and 314, 316 in figure 29 and 318 and 320 in figure 30), a trench where a index matching liquid (222) is filled, a heating system (216, 210) to create a bubble (220) that acts as a mirror to reflect the light from the one waveguide to another waveguide (see figures 17, 29 and 30).

Fouquet et al show a bubble that is less than total volume of the trench and the trench that is longer and deeper than the bubble (see figure 17). Since Fouquet et al disclose

the claimed structure it inherently meets the claimed limitation of having pressure within the bubble that is not substantially increased by pressure exerted by sidewalls of the trench. Fouquet et al also shows pillars (124, 120) that extends from the heaters (204, 214) up the sidewalls of the trench.

### ***Conclusion***

4. The prior art documents submitted by applicant have been considered and made of record (note the attached copy of form PTO-1449).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sato et al (U.S. Patent 6,072,924) teach an optical switch using an index matching liquid.
